

# Building a World Class Information Security Management Framework

20 – 22 October 2010  
Marina Mandarin Singapore

## Platform Facilitator:

**Mr. David Lacey**

**Member of Infosecurity Europe "Hall of Fame"**

- Former Principal Technology Consultant for Shell International
- Recognised international thought leader in information security management
- Author of the books, "Managing the Human Factor in Information Security" and "Managing Security in Outsourced and Offshored Environments"

Over the last decade, information security has grown from a technical specialism to a business imperative. The growth in cyber threats accompanied by increasing customer expectations, as well as a growing wave of regulatory compliance, is forcing all organisations to raise their game and adopt the latest and best security practices.

No enterprise can afford to ignore this challenge. Information security is now an executive board issue. Directors and investors require assurance and evidence that appropriate action is being taken to prevent and respond to security threats and data breaches.

Against a background of a growing shortage of skills and experience, security managers must harness every available opportunity to **understand the emerging information risk landscape and identify best practices in information security, as well as the resources and methods needed to implement them.**

Enterprises that succeed in meeting this challenge will **build greater customer confidence, experience lower levels of security incidents, reassure executive boards and investors, and gain more efficient governance and regulatory compliance processes.**

Join us in this platform, in which Mr. Lacey will share his extensive knowledge and experience of practical methods for designing and implementing highly effective enterprise frameworks for information security management. The vital issues discuss will include:

- **Enterprise security, risk and compliance frameworks**
- **Security in the system development cycle**
- **Managing the human factor in information security**
- **Security in outsourced and cloud computing services**
- **Incident response, business continuity and crisis management**

Involving a mixture of discussions, case studies and exercises, this platform will equip delegates with the insight and techniques to design highly effective security processes, organisational designs and architectures to prevent and respond to the emerging information risk landscape.

Tapping into Mr. Lacey's extensive experience, this platform is a **must for IT, Security and Risk professionals aiming to build or contribute to enterprise information security frameworks, or to better understand the emerging problem and solution space associated with this increasingly important business issue.**
